INTEROPERABILITY ASSESSMENT PLATFORM

# Interoperability Assessment Report

## Full Assessment Report with Recommendations

Assessed instrument

**Σχέδιο για την ισότιμη πρόσβαση των ατόμων με αναπηρία και των ατόμων με ειδικές εκπαιδευτικές ανάγκες - Πανεπιστήμιο Αιγαίου**

Framework-guided - Evidence-supported - Traceable

| OUTCOME | ASSESSMENT BASIS | TRACEABILITY | VALIDATION |
|---|---|---|---|
| **Voluntary assessment recommended**<br>assessment posture | **IEA - Guidelines - EIF 3.0**<br>selected frameworks | **Included**<br>evidence matrix | **Applied**<br>internal review |

14 July 2026

Decision-support output. Final institutional use requires human review against the final legal text and implementation evidence.

# Executive Assessment Dashboard

At-a-glance summary of the assessment output before the detailed report narrative.

| OUTCOME | BINDING REQUIREMENTS | PRIORITISED RISKS | RECOMMENDATIONS |
|---|---|---|---|
| **Voluntary assessment recommended**<br>trigger posture | **7**<br>extracted obligations | **3**<br>main risk register | **8**<br>corrective actions |

| ASSESSMENT BASIS | EVIDENCE TRACEABILITY | VALIDATION LAYER |
|---|---|---|
| **IEA - Guidelines - EIF 3.0**<br>framework context | **Included**<br>Annex-level evidence | **Applied**<br>claim review |

| ASSESSMENT STORY | |
|---|---|
| | **The central interoperability issue in this policy is the establishment of binding institutional obligations for universal accessibility and the protection of sensitive disability-related data across all university services. While the policy references major legal frameworks (national, UN CRPD) and mandates systematic accessibility and support for persons with disabilities and special educational needs, it lacks concrete technical, semantic, and governance specifications for implementing these requirements in digital public services, content, and records management. This under-specification risks fragmented operationalisation, inconsistent accessibility, and underdeveloped data protection in any future digitalisation or registry deployment.** |

The dashboard summarises the assessment; the detailed legal reasoning and evidence excerpts remain in the main chapters and annexes.

Assessment Mode

Full Assessment Report with Recommendations

Full Assessment Report with Recommendations: complete report including risks, corrective measures, drafting recommendations, solution/reuse opportunities, legal-to-implementation reasoning, maturity, validation and traceability.

Document Summary

| Field | Entry |
|---|---|
| Assessment Mode | Full Assessment Report with Recommendations |
| Legislative or Policy File | Σχέδιο για την ισότιμη πρόσβαση των ατόμων με αναπηρία και των ατόμων με ειδικές εκπαιδευτικές ανάγκες - Πανεπιστήμιο Αιγαίου |
| Responsible Public Sector Body / Union Entity | Πανεπιστήμιο Αιγαίου (University of the Aegean) |
| Jurisdiction | Greece |
| Assessment Version | Analytical assessment |
| Date / Version of Instrument | unknown |
| Status | unknown |
| Assessment Posture | Voluntary assessment recommended |
| Lifecycle Posture | unknown |
| Source Coverage | full source uploaded; stage-specific evidence selected |

Assessment basis used

| Document / framework | Used | Notes |
|---|---|---|
| Interoperable Europe Act | Yes | locked / always used |
| IE Act Guidelines | Yes | locked / always used |
| EIF 3.0 | Yes | included |

Sensitive terms configuration

| Lexicon source | Used | Notes |
|---|---|---|
| Lexicon mode | Internal assessor lexicon | Structured internal source used as one contextual signal layer |
| Signal coverage | Included | Interoperability and digital-transformation signals are interpreted together in context, not exposed as separate user choices |
| Custom uploaded lexicon | No | No custom list uploaded |

Assessor methodology

The assessment applies the Interoperable Europe Act trigger logic and the EIF interoperability layers to the assessed instrument. It identifies binding requirements, affected public-service flows, cross-border interoperability effects, sensitive drafting patterns and corrective measures. Structured evidence, validation and traceability are used to support the assessor's judgment, but the report's focus is the substantive interoperability assessment.

Important limitation

This report distinguishes the legal instrument from its implementation layer. The legal text may establish an enabling legal basis, while implementation-level interoperability may depend on later technical specifications, procurement documents, architecture documentation, security policies, governance arrangements or operational evidence.

Trigger note

This is assessed as a draft instrument. A mandatory Interoperable Europe Act assessment is not established at this stage unless the draft or its implementation decisions set new or substantially modified binding requirements for trans-European digital public services. A targeted or voluntary assessment is nevertheless recommended before adoption or implementation where digital registries, platforms, certificates, consular workflows, publication mechanisms or procurement specifications are involved.

## Table of Contents

1. Executive Summary

2. Identification of the Assessed Instrument

3. Preliminary Determination on the Need for an Interoperability Assessment
4. Scope and Methodological Basis
5. Identified Binding Requirements
6. Affected Trans-European Digital Public Services and Stakeholders
7. Assessment of Cross-Border Interoperability Effects
8. Sensitive Terms, Phrases, and Drafting Patterns Detected
9. Relevant Interoperability Solutions and Reuse Opportunities
10. Full Risk Prioritisation and Corrective Measures
11. Conclusions
12. Annexes

# 1. Executive Summary

## 1.1 Assessment Purpose and Posture

This report provides a full interoperability assessment with recommendations. It combines assessor-style substantive analysis with structured evidence, legal-to-implementation reasoning, maturity profiling, traceability and requirement-risk-recommendation mapping.

1.1.1 How to read this assessment

This assessment should be read as an expert interoperability report rather than as a system log. The main narrative gives the assessor's substantive judgment on cross-border interoperability effects; the tables and annexes preserve the structured evidence architecture behind that judgment. Technical references such as interfaces, data models, logging schemas, accessibility standards and authentication mechanisms are treated as implementation-level measures unless explicitly established as legal obligations in the source.

1.1.2 Central Interoperability Issue

The central interoperability issue in this policy is the establishment of binding institutional obligations for universal accessibility and the protection of sensitive disability-related data across all university services. While the policy references major legal frameworks (national, UN CRPD) and mandates systematic accessibility and support for persons with disabilities and special educational needs, it lacks concrete technical, semantic, and governance specifications for implementing these requirements in digital public services, content, and records management. This under-specification risks fragmented operationalisation, inconsistent accessibility, and underdeveloped data protection in any future digitalisation or registry deployment.

Main interoperability asset or process: Data collection and records management infrastructure on disabilities and participation.

### Main affected services and flows:

- Accessible University Information and Communications.
- Administrative and Academic Support Services (Accessible Interfaces).
- Disability and Participation Data Collection and Registry.
- Confidential Records and Sensitive Data Protection Service.
- Inclusive Participation in University Consultations.

### Primary interoperability themes:

| Theme | Why it matters | Layers | Priority |
|---|---|---|---|
| Institutional accessibility obligations for digital and administrative services. | Drives structural change in university service provision and information management, requiring accessibility and inclusiveness to be embedded in all functions, including digital systems. | Legal; Organisational; Technical; Governance. | High |
| Systematic collection and management of disability-related data. | Demands the creation and governance of structured records/registries, triggering both technical infrastructure and data protection requirements. | Organisational; Technical; Governance. | High |
| Accessible information and communication formats. | Obliges the university to provide all digital and physical content in accessible forms, shaping semantic, technical, and user-centric interoperability. | Legal; Technical; Semantic. | High |
| Confidential handling of sensitive data. | Legal confidentiality for disability-related data necessitates enforceable technical and governance solutions in all IT and records management activities. | Legal; Technical; Governance; Security. | High |
| Alignment with international legal definitions (UN CRPD) and national rights obligations. | Frames eligibility, scope, and the need for future semantic harmonisation and legal interoperability, potentially affecting cross-border or EU-wide service trends. | Legal; Semantic; Governance. | Medium |

## 1.2 Summary of the Assessed Instrument

The assessed instrument is Σχέδιο για την ισότιμη πρόσβαση των ατόμων με αναπηρία και των ατόμων με ειδικές εκπαιδευτικές ανάγκες - Πανεπιστήμιο Αιγαίου. It is classified as Policy, issued by Πανεπιστήμιο Αιγαίου (University of the Aegean), with status Unknown. The stated or inferred policy objective is: To establish an inclusive university environment ensuring universal accessibility, equal treatment, support, and full participation for persons with disabilities and special educational needs within all aspects of university life, in conformity with national constitutional rights and the UN Convention on the Rights of Persons with Disabilities.

## 1.3 Main Findings

### Finding 1 - Universal accessibility is a binding institutional obligation

Sets foundational requirements for service and content accessibility across all university functions.

Evidence strength: Explicit. Confidence: high. Impact: Conditional.

### Finding 2 - Systematic collection of disability data is required but under-specified

Institutional commitment mandates recording disability and participation data, yet lacks data models and governance detail.

Evidence strength: Explicit. Confidence: high. Impact: Conditional.

### Finding 3 - Technical specifications remain implementation-dependent

Policy guarantees confidentiality but omits critical technical, governance, and audit requirements needed for actual compliance.

Evidence strength: Explicit. Confidence: high. Impact: Conditional.

### Finding 4 - Semantic specifications are needed for reliable reuse

Obligation for accessible information lacks standardisation or reference to recognised accessibility frameworks.

Evidence strength: Explicit. Confidence: high. Impact: Conditional.

### Finding 5 - Governance and access responsibilities remain under-specified

The lack of specified responsibilities undermines transparency and risk accountability gaps in data management.

Evidence strength: Missing. Confidence: low. Impact: Conditional.

### Finding 6 - Succession evidence requires structured digital handling

Potential future interoperability obligations are not addressed, risking future fragmentation.

Evidence strength: Missing. Confidence: low. Impact: Conditional.

### Finding 7 - Technical specifications remain implementation-dependent

Implementation is likely to be inconsistent without explicit technical or procurement guidance.

Evidence strength: Missing. Confidence: low. Impact: Conditional.

## 1.4 Main Interoperability Risks and Issues Identified

### R-01 - Absence of technical requirements for confidentiality and security of sensitive disability records

The policy establishes confidentiality for sensitive personal data but fails to specify the technical or procedural controls (such as encryption, access control, or audit trails) that are required to ensure effective data protection and legal compliance.

Layer: Security and trust. Priority: High.

### R-02 - Under-specified governance and role allocation for disability data management

The policy lacks explicit assignment of data controllers, processors, and other governance roles for collecting and handling sensitive personal data on disabilities and special educational needs, leaving responsibilities and accountability chains undefined.

Layer: Governance. Priority: High.

### R-03 - No provision for integration with national or European disability registries and data exchanges

The policy does not address future harmonisation or technical integration with national, EU, or international disability databases or reporting frameworks, which may later be required by law or for cross-institutional comparability.

Layer: Governance. Priority: Medium.

## 1.5 Strategic Corrective Direction

The main correction strategy is to operationalise the policy’s legal and organisational commitments through explicit technical, semantic, and governance specifications for all relevant digital and information systems. The university should adopt recognised accessibility and data protection standards (e.g., WCAG, GDPR technical measures), define and assign governance roles (data controllers/processors), and ensure harmonisation with external frameworks where future

interoperability demands may arise. Regular review, comprehensive documentation, and integration of user feedback should drive ongoing compliance and continuous improvement.

## 1.6 Main Corrective Measures and Recommendations

Recommended technical specifications are not presented as direct legal obligations unless explicitly supported by the source. They represent implementation-level measures for achieving interoperability.

### REC-01 - Implementation measure

Define and implement technical and organisational measures ensuring confidentiality and security for all sensitive disability-related records and data collections.

Priority: High. Responsible actor: University data protection officer and IT security manager.

### REC-02 - Governance action

Assign and transparently document roles and responsibilities for data controller, data processor, and system governance for all disability data management activities.

Priority: High. Responsible actor: University governance board in collaboration with data protection officer.

### REC-03 - Technical specification

In all digital accessibility, information, and data collection systems, where appropriate, require alignment with well-established European accessibility and interoperability standards.

Priority: High. Responsible actor: University IT services and communications office.

### REC-04 - Implementation measure

Adopt harmonised data models and classification schemas for recording disability data and participation profiles.

Priority: Medium. Responsible actor: Registry/data management unit in consultation with institutional research and governance.

### REC-05 - Governance action

Introduce periodic review mechanisms to monitor alignment with evolving national and EU interoperability, accessibility, and inclusion obligations.

Priority: Medium. Responsible actor: Governance board / Institutional compliance unit.

### REC-06 - Operational guidance

Establish clear operational procedures for the provision of accessible information across all channels.

Priority: Medium. Responsible actor: Communications office, accessibility officers, and IT support staff.

## 1.7 Overall Assessment Outcome

Outcome: Voluntary assessment recommended. The instrument is a university-level policy with binding effect within the institution, requiring accessible provision of information, digital data collection, and protection of sensitive personal data. It establishes digital accessibility and information duties that are directly relevant for digital public services within the University of the Aegean. However, there is no evidence that the instrument itself introduces or reforms a national, cross-border, or trans-European digital public service, nor mandates supporting ICT system procurement or design of EU-wide interoperability frameworks. As no direct trigger exists under the Interoperable Europe Act for institution-internal digital accessibility requirements, a mandatory assessment is not currently required. Nevertheless, a voluntary assessment is strongly recommended due to the policy's digital public service impact, its relevance for foreign/mobile students, and the likelihood that any future supporting ICT or registry systems-if introduced-would need to comply with interoperability obligations at national or European level.

# 2. Identification of the Assessed Instrument

| Element | Assessment |
|---|---|
| Assessment mode | Full Assessment Report with Recommendations |
| Title | Σχέδιο για την ισότιμη πρόσβαση των ατόμων με αναπηρία και των ατόμων με ειδικές εκπαιδευτικές ανάγκες - Πανεπιστήμιο Αιγαίου |
| Type and legal nature | policy |
| Issuing authority or responsible body | Πανεπιστήμιο Αιγαίου (University of the Aegean) |
| Jurisdiction | Greece |
| Date, version and status | unknown; unknown |
| Lifecycle posture | unknown |
| Policy objective | To establish an inclusive university environment ensuring universal accessibility, equal treatment, support, and full participation for persons with disabilities and special educational needs within all aspects of university life, in conformity with national constitutional rights and the UN Convention on the Rights of Persons with Disabilities. |
| Source coverage | full source uploaded; stage-specific evidence selected |

## 2.1 Digital Public Service and Cross-Border Relevance

### Digital public service elements:

- Accessible provision of university information in alternative formats.
- Accessible academic and administrative services.
- Support for participation in public consultations.
- Data collection on frequency and forms of disabilities, participation, and studies completion.
- Potential future digital tools for student and staff support.

### Cross-border elements:

- Reference to the UN Convention on the Rights of Persons with Disabilities (international obligation).
- General commitment to non-discrimination in higher education, potentially relevant for mobile or foreign students.

# 3. Preliminary Determination on the Need for an Interoperability Assessment

## 3.1 Legal and Procedural Basis

The preliminary determination follows the Interoperable Europe Act trigger logic: new or substantially modified binding requirements, public-sector or Union entity responsibility, relevance to digital public services, cross-border interaction through network or information systems, and potential effects on cross-border interoperability.

## 3.2 Trigger Analysis

| Question | Determination | Confidence |
|---|---|---|
| Does the instrument define or affect binding requirements for digital public services or supporting information systems? | Unclear | low |
| Could later implementing acts, procurement specifications or system-level decisions adopted after 12 January 2025 trigger a mandatory assessment? | Conditional / not established | high |
| Would the Interoperable Europe Act require a mandatory interoperability assessment for this class of instrument, given its profile and evidence? | No | medium |

## 3.3 Conclusion on Mandatory or Voluntary Assessment

This is assessed as a draft instrument. A mandatory Interoperable Europe Act assessment is not established at this stage unless the draft or its implementation decisions set new or substantially modified binding requirements for trans-European digital public services. A targeted or voluntary assessment is nevertheless recommended before adoption or implementation where digital registries, platforms, certificates, consular workflows, publication mechanisms or procurement specifications are involved.

## 3.4 Clarifications Required

- Clarify the legal status and adoption date of the instrument (draft, in-force, internal policy, regulation).
- Determine if the university operates or plans to operate digital platforms/database systems interoperable with national or European registries.
- Specify whether any implementing decisions, procurement specifications, or technical annexes are planned or in development.
- Clarify if any obligations are imposed for interoperable digital service provision to foreign or mobile students under national/EU schemes.

# 4. Scope and Methodological Basis

## 4.1 Scope of the Assessment

The assessment covers requirements that affect digital public services, registries, platforms, electronic evidence, governance responsibilities, service recipients, cross-border interactions and implementation readiness. Private-sector compliance is considered only where it supports, supplies or affects public-sector digital service interoperability.

## 4.2 Methodological Basis

| Method step | Purpose |
|---|---|
| Document parsing | Extract page-marked text and preserve references. |
| Stage-specific retrieval | Select relevant articles, annexes and sections for each assessment stage. |
| Requirement extraction | Identify obligations, prohibitions, conditions and procedural duties. |
| Trigger assessment | Apply the Interoperable Europe Act decision-tree logic. |
| Expert breadth scan | Identify diverse interoperability themes before the report locks onto a single narrative. |
| Layer analysis | Assess legal, organisational, semantic, technical and governance effects. |
| Solution identification | Map gaps to reusable solutions, standards and implementation assets. |
| Assessment-story synthesis | Identify a multi-theme expert narrative and the most important case-specific issues. |
| Risk prioritisation | Merge overlapping risks and prioritise the issues that should appear in the main report. |
| Validation | Challenge unsupported, overconfident or insufficiently evidenced claims. |
| Traceability | Preserve detailed evidence, maturity and requirement-risk-recommendation traceability in annexes. |

## 4.3 Reference Framework and Source Documents

| Document / framework | Used | Notes |
|---|---|---|
| Interoperable Europe Act | Yes | locked / always used |
| IE Act Guidelines | Yes | locked / always used |
| EIF 3.0 | Yes | included |

## 4.4 How the Assessment Basis Is Used

The Interoperable Europe Act is used for the legal trigger logic. The assessment guidelines are used for the assessment and reporting method. EIF 3.0 supports analysis across legal, organisational, semantic and technical interoperability layers. Uploaded or custom sources are treated as supplementary context only when they are provided and assessed as relevant.

## 4.5 Limitations, Assumptions and Delimitations

- The uploaded source was parsed in full. However, each assessment stage relies on selected retrieved excerpts rather than inserting the complete source text into every model call.
- Findings requiring exhaustive review of all annex entries, sector-specific use cases, future implementing acts or technical schedules should be validated against the complete legal source and subsequent implementation documents.
- Implementation-level interoperability may depend on later technical specifications, procurement documents, architecture documentation, security policies, governance arrangements or operational evidence.
- Recommended standards, vocabularies and technical approaches are treated as implementation guidance unless the assessed source explicitly establishes them as binding requirements.

Human validation note

The output is intended as decision-support for interoperability assessors. It should be reviewed against the final legal text, implementing measures and technical evidence before being used for institutional decisions.

# 5. Identified Binding Requirements

## 5.1 Approach to Identification

Binding requirements were identified where the instrument imposes obligations, prohibitions, conditions, criteria or limits with plausible relevance to digital public services or cross-border interoperability. The main body summarises the highest-relevance requirements; detailed matrices are provided according to the selected assessment mode.

## 5.2 Binding Requirements Identified

| ID | Provision | Requirement / legal effect | Nature | Main affected actors |
|---|---|---|---|---|
| BR-01 | Cross-cutting evidence from relevant AI Act provisions PAGE / | The University of the Aegean must systematically provide a universally accessible, supportive, safe, and inclusive environment for all persons with disabilities and special educational needs across all academic and administrative functions. | Legal / organisational | University administration; Academic staff; Administrative staff; Students with disabilities; Students with special educational needs. |
| BR-02 | Cross-cutting evidence from relevant AI Act provisions PAGE / | The University must ensure the provision of information in accessible formats and make available specialized tools for multiple forms of access to information resources and activities. | Legal / organisational | University IT services; University communications offices; Persons with disabilities; Students with special educational needs. |
| BR-03 | Cross-cutting evidence from relevant AI Act provisions PAGE / | The University must ensure confidentiality in maintaining sensitive personal data of persons with disabilities and special educational needs. | Legal / technical | University data controllers; University IT and records management staff; All organisational units handling personal data. |
| BR-04 | Cross-cutting evidence from relevant AI Act provisions PAGE / | The University aims to record data on the frequency and forms of persons with disabilities and special educational needs, the barriers they encounter, and specifically track the needs and outcomes of students in this group as part of institutional profiling and planning. | Organisational / technical / governance | University registry/data collection units; Institutional planning/governance bodies; Persons with disabilities. |
| BR-05 | Cross-cutting evidence from relevant AI Act provisions ARTICLE / Άρθρο 1 | The University must recognize the definition of disability in accordance with the UN Convention on the Rights of Persons with Disabilities, encompassing long-term physical, mental, intellectual, or sensory impairments that may hinder full and effective participation in society. | Legal | University governance bodies; All administrative/academic units. |
| BR-06 | Cross-cutting evidence from relevant AI Act provisions ARTICLE / Άρθρο 21 | The University must ensure that persons with disabilities have access to higher education, professional training, and lifelong learning on an equal basis with others, providing reasonable accommodations as necessary. | Legal / organisational | University admissions; Academic departments; Support services; Students with disabilities. |
| BR-07 | Cross-cutting evidence from relevant AI Act provisions ARTICLE / Άρθρο 24 | The University must ensure that persons with disabilities enjoy measures securing autonomy, professional integration, and participation in the social, economic, and political life of the country. | Legal / organisational | University governance; All staff; Students with disabilities. |

# 6. Affected Trans-European Digital Public Services and Stakeholders

## 6.1 Digital Public Services in Scope

| Service | Description | Cross-border interaction/data flow | Relevance |
|---|---|---|---|
| Accessible University Information and Communications | Provision of university information and communications in accessible formats, including alternative digital formats and specialized access tools for persons with disabilities and special educational needs. | Digital content (accessible formats); Notifications; Accessible information. | high |
| Administrative and Academic Support Services (Accessible Interfaces) | Accessible administrative and academic support services made available to all university stakeholders, adjusted for persons with disabilities and special educational needs. | Service requests; Support tickets; Administrative advisories. | high |
| Disability and Participation Data Collection and Registry | Data collection and maintenance service regarding the frequency, forms, barriers, needs, and outcomes (including completion) related to university members with disabilities and special educational needs. | Personal data; Statistical data; Institutional reports. | high |
| Confidential Records and Sensitive Data Protection Service | Management of sensitive personal data, ensuring confidentiality for records concerning disabilities and special educational needs. | Sensitive data; Consent records; Access logs (if implemented). | high |
| Inclusive Participation in University Consultations | Support for the participation of persons with disabilities and special educational needs in public consultations and university decision-making. | Consultation documents; Feedback submissions. | medium |

## 6.2 Stakeholders

| Stakeholder category | Role | Interoperability relevance |
|---|---|---|
| University of the Aegean administration | Responsible for policy implementation, accessible services, and compliance with legal/organisational obligations. | All data collection, accessibility and confidentiality service requirements. |
| University IT/communications services | Implementers and operators of digital content, accessibility tools, and information platforms. | Accessible formats and digital content provision; Potential records/databases; Data security/confidentiality. |
| University staff (academic and administrative) | Service providers, support contacts, possible data processors. | Obligations to provide accessible and inclusive support/services. |
| Students with disabilities and/or special educational needs | Primary rightsholders and beneficiaries of accessibility and support measures. | Accessible information/services; Protection of personal data; Participation rights; Consultation. |
| Visitors with disabilities | Occasional beneficiaries of accessible environments and information. | Accessible infrastructure; Potential access to digital information. |
| National or international authorities (potentially) | Possible recipients of reports/statistics; oversight of compliance with national and UN CRPD obligations. | Data reporting (if implemented); Accessibility compliance. |

## 6.3 Main Dependencies

| Dependency | Type | Risk if missing |
|---|---|---|
| Existence of an accessible digital platform or content delivery system | Technical / organisational | University may fail to meet explicit obligations for accessible information/services for persons with disabilities, leading to legal non-compliance and user exclusion. |
| Specification and governance of a data registry or collection system for disability and participation data | Technical / organisational / governance | Inability to deliver accurate profiling, planning, and support; risks to data accuracy, continuity and responsible processing, undermining policy objectives. |

| Dependency | Type | Risk if missing |
|---|---|---|
| Proper data protection and confidentiality mechanisms for sensitive personal data | Technical / governance | Exposure of sensitive personal data, breach of legal obligations, potential harms to rightsholders, non-compliance with data protection requirements. |
| Clear definition of accessible formats and semantic standards for content | Semantic / technical | Lack of harmonised content delivery; risk of inaccessible or inconsistent information, reduced interoperability for persons with varying access needs. |
| Role specification for data controllers, processors, and access auditing | Governance / technical | Unclear responsibilities and chain of accountability for sensitive data handling, increasing risks of mismanagement and non-compliance. |
| Interoperability with potential cross-border/mobile student services (if digitised) | Legal / technical / governance | Reduced accessibility for mobile/EU/foreign students and non-compliance with international/national obligations; difficulty serving diverse user groups if standards diverge. |

# 7. Assessment of Cross-Border Interoperability Effects

## 7.1 Expert Interoperability Themes

| Theme | Why it matters | Affected layers | Priority |
|---|---|---|---|
| Institutional accessibility obligations for digital and administrative services. | Drives structural change in university service provision and information management, requiring accessibility and inclusiveness to be embedded in all functions, including digital systems. | Legal; Organisational; Technical; Governance. | High |
| Systematic collection and management of disability-related data. | Demands the creation and governance of structured records/registries, triggering both technical infrastructure and data protection requirements. | Organisational; Technical; Governance. | High |
| Accessible information and communication formats. | Obliges the university to provide all digital and physical content in accessible forms, shaping semantic, technical, and user-centric interoperability. | Legal; Technical; Semantic. | High |
| Confidential handling of sensitive data. | Legal confidentiality for disability-related data necessitates enforceable technical and governance solutions in all IT and records management activities. | Legal; Technical; Governance; Security. | High |
| Alignment with international legal definitions (UN CRPD) and national rights obligations. | Frames eligibility, scope, and the need for future semantic harmonisation and legal interoperability, potentially affecting cross-border or EU-wide service trends. | Legal; Semantic; Governance. | Medium |

## 7.2 Legal Interoperability

| Finding | Implementation dependency | Classification | Assessment note |
|---|---|---|---|
| The policy establishes a binding legal obligation for universal accessibility, non-discrimination, and equal participation for persons with disabilities and special educational needs within all university functions. | Requires corresponding technical, organisational and governance adaptation. | Enabling | Maintain strong legal alignment; ensure implementation of supporting measures at operational level. |
| Explicit obligation is imposed to protect confidentiality when handling sensitive personal data of students and staff with disabilities. | Requires data protection mechanisms, role specification, and audit trail within any digital system. | Enabling | Translate confidentiality principles into specific operational and technical requirements. |
| Obligation to define and serve all disability and special educational needs categories per the UN Convention is directly referenced. | Semantic and technical frameworks should align their definitions, data models, and eligibility logic accordingly. | Enabling | Ensure all technical systems, registries, and user interfaces are compatible with the definitional scope referenced. |
| Obligation to provide reasonable accommodations in higher education and training for persons with disabilities is established. | Requires workflows and tools for accommodations (including digital service delivery). | Enabling | Cascade legal requirements into inclusive design of all workflows and platforms. |

## 7.3 Organisational Interoperability

| Finding | Implementation dependency | Classification | Assessment note |
|---|---|---|---|
| The policy requires systematic data collection and profiling on disability, needs, barriers, and outcomes-implying organisational structures for registry/database deployment. | Record-keeping and quality assurance units must be established or equipped accordingly. | Enabling | Develop or formalise organisational units responsible for data collection and reporting, ensuring adequate resourcing. |
| Explicit mandate to train and upskill staff (academic and administrative) on supporting persons with disabilities and special educational needs. | Requires ongoing investment in staff development programmes. | Enabling | Institutionalise induction and continuous training reflecting legal, user, and technical accessibility requirements. |

| Finding | Implementation dependency | Classification | Assessment note |
|---|---|---|---|
| The policy does not assign or clarify roles for data controller, data processor, or access management regarding data collection and sensitive records. | Clear assignment of roles required for records and data confidentiality duties. | Ambiguous | Define and publish governance/operational role specification for all critical data management activities. |
| The policy foresees development and reinforcement of inclusion-focused structures throughout the university. | Effective operation depends on competence, mandates and inter-unit collaboration. | Enabling | Building on this, ensure minimum standards, coordination, and reporting for all decentralised inclusion units. |

## 7.4 Semantic Interoperability

| Finding | Implementation dependency | Classification | Assessment note |
|---|---|---|---|
| The requirement for provision of university information in accessible formats is present, but without specifying which standards or definitions apply. | Semantic/technical standards are needed to harmonise outputs, especially where digital platforms or cross-unit content is delivered. | Ambiguous | Define and require use of recognised accessibility/format standards, referencing European and international frameworks where possible. |
| Disability types and data points are listed or referenced but underlying classification schemas and data models are absent. | Data models should be developed referencing widely accepted schemas, facilitating reporting and system integration. | Ambiguous | Harmonise data categories and identifiers with external frameworks (national or EU, such as ECHI, ICD, etc.) as appropriate. |

## 7.5 Technical Interoperability

| Finding | Implementation dependency | Classification | Assessment note |
|---|---|---|---|
| Provision of accessible information and support services implies development or adaptation of digital platforms and content workflows. | Any new or adapted ICT systems must deliver on inclusiveness and accessibility as core design goals. | Enabling | Ensure accessibility is a core requirement for all ICT procurement, content management and service design. |
| The policy does not define specific requirements for data models, metadata, or technical interoperability for supporting platforms or registries. | Interoperability specifications should be part of any digital implementation plan. | Ambiguous | Incorporate and explicitly reference technical standards for data management and exchange at the digitalisation stage. |
| No machine-readable format, metadata or authentication provisions are included for digital accessibility, management, or record access. | Digital service implementation should mandate standards for data formats, metadata, and secure authentication. | Ambiguous | Reference and adopt appropriate technical frameworks at implementation level. |
| Audit trails and access control requirements for systems holding sensitive data are not specified. | Technical system architecture must provide accountability, traceability, and incident response. | Ambiguous | Specify audit logging and access management requirements as part of system deployment. |

## 7.6 Interoperability Governance

| Finding | Implementation dependency | Classification | Assessment note |
|---|---|---|---|
| Governance structures and accountability mechanisms for data confidentiality and inclusion services are implied but not detailed. | Internal governance, reporting, and oversight mechanisms must be clarified. | Ambiguous | Codify governance structures and chain of accountability for accessibility and data protection policy. |
| No obligations regarding integration or harmonisation with national, international or EU-level registries or reporting frameworks are set out. | Coordination with external authorities and frameworks may become necessary. | Ambiguous | Link registry/database plans with relevant external authorities or frameworks at project inception. |
| No documented procurement procedures or technical annexes guide the development and operation of digital public services or supporting ICT systems. | All future ICT procurements should address interoperability at both requirement and monitoring stage. | Ambiguous | Document procurement governance and require evidence of interoperability compliance for all ICT system acquisitions. |

## 7.7 User Experience and Service Design

| Finding | Implementation dependency | Classification | Assessment note |
|---|---|---|---|
| Failure to specify accessibility standards for digital and communication interfaces risks fragmented and non-user-centric experiences for persons with disabilities or special educational needs. | Digital platforms must be designed with reference to established accessibility frameworks and validated with user feedback. | Ambiguous | Adopt and require compliance with recognised accessibility/usability standards for all user-facing platforms and communications. |
| Channels, modalities, and standards for inclusive public consultation participation are not specified, risking exclusion of target users from policy/process co-design. | Consultation tools must be developed or adapted with inclusiveness as a core requirement. | Ambiguous | Implement accessible, multimodal consultation processes; monitor user participation and satisfaction. |

## 7.8 Security and Trust

| Finding | Implementation dependency | Classification | Assessment note |
|---|---|---|---|
| Confidentiality requirement is established but without reference to technical or procedural measures (encryption, access controls, data minimisation, etc.) for digital records. | ICT deployments must apply best available technical and organisational controls. | Ambiguous | Map confidentiality declaration to explicit technical and process controls as part of system design and operation. |

## 7.9 Consolidated Assessment

This university-level policy creates a legally binding, rights-based inclusion framework, imposing institutional obligations for universal accessibility and protection of sensitive data in all academic and administrative services. The resulting interoperability landscape is dominated by: (a) the need for robust, accessible, and adaptable digital and information service provision; (b) establishment of data collection and profiling on disability and participation; and (c) strict confidentiality requirements, all within a framework that aligns with national and international rights norms but with limited detailed specification for digital or technical implementation.

# 8. Sensitive Terms, Phrases, and Drafting Patterns Detected

Detected sensitive terms are treated as contextual signals rather than automatic findings. The assessment interprets them against the legal and operational context to distinguish legacy administrative patterns, implementation under-specification and genuine interoperability concerns.

## 8.1 Explicit Legacy Administrative Anti-Patterns

No explicit paper-based, physical-presence, handwritten-signature, stamp/seal, fax-based or physical-archive legacy administrative anti-patterns were detected in the available evidence.

## 8.2 Drafting and Implementation Under-Specification Patterns

| Pattern | Interoperability concern | Recommended control |
|---|---|---|
| Data collection obligation without specification of technical or governance architecture. | The policy explicitly states that the university will collect and record data on the frequency, forms, and barriers faced by individuals with disabilities and special educational needs. | Explicitly define the data governance, data controller, data protection safeguards, technical solution, and access/audit obligations for the data collection activity. |
| Accessible format requirement lacking semantic and technical specification. | The policy requires the provision of information in 'accessible formats' but does not specify the semantic, technical, or organisational standards to be followed (e.g., WCAG, file formats, alternative representations), increasing the risk of inconsistent. | Reference targeted semantic and technical accessibility standards for information provision, potentially including specific digital accessibility guidelines or file format requirements. |
| Confidentiality obligation for sensitive data with insufficient technical and governance details. | The policy states that confidentiality for sensitive personal data will be ensured but omits clear governance, audit, access-control, or information security requirements, which may undermine effective implementation and regulatory compliance. | Define technical, organisational, and audit trail measures for managing confidentiality of sensitive data, and assign a named governance owner or data protection responsibility. |
| Absence of timeframes and update frequency for data recording or service adaptation. | The recurring commitment to systematic improvement and data collection is not accompanied by defined timeframes, update cycles, or triggers for action, limiting enforceability and interoperability with monitoring or reporting regimes. | Specify periodicity, update frequency, or review processes for key obligations such as data capture and service accessibility reviews. |
| No delineation of digital versus non-digital service channels. | Obligations are formulated generically as 'provision' or 'access' of services and information, with no clear delineation between digital, physical, or hybrid delivery modes. | Explicitly distinguish digital channels, platforms, or modalities where applicable, and define requirements for multichannel or cross-channel interoperability if services are to be delivered via more than one type. |

# 9. Relevant Interoperability Solutions and Reuse Opportunities

Recommended technical specifications are not presented as direct legal obligations unless explicitly supported by the source. They represent implementation-level measures for achieving interoperability.

## 9.1 Relevant Solutions and Assets

| Solution / asset | Relevance | Recommended use |
|---|---|---|
| Web Content Accessibility Guidelines (WCAG), including EN 301 549 as the European accessibility standard for websites and digital content. | The obligation to provide information in accessible formats (P4 / PAGE / PAGE 4) and to ensure universal accessibility for persons with disabilities directly triggers the need for harmonised accessibility standards. | Reference and where appropriate, require compliance with WCAG and EN 301 549 standards for all digital platforms, websites, and content publication; ensure regular review and user validation. |
| EU Core Vocabularies (e.g., Core Person, Core Public Organisation); international disability classification frameworks (e.g., ECHI, ICD, ICF). | The policy requires systematic data collection on disability forms, needs, and participation (P5 / PAGE / PAGE 5). | Adopt or adapt recognised EU Core Vocabularies and international disability classification standards in any database or registry design; document mapping to facilitate interoperability. |
| European General Data Protection Regulation (GDPR) technical and organisational measures (Article 32), including access control, encryption, and audit logging; model technical and governance templates from Interoperable Europe resources. | Confidentiality is a legally binding requirement (P4 / PAGE / PAGE 4), but no operational or technical measures are defined. GDPR-compliant solutions ensure legal and technical interoperability, accountability, and traceability. | Implement GDPR-aligned technical and organisational controls (access restrictions, encryption, logging); create formal data controller/processor role assignments and publish governance templates. |
| DCAT-AP (Data Catalog Vocabulary Application Profile for data portals in Europe); Interoperable Europe Core Public Service Vocabulary. | If data collected by the university may need to be reported or shared with national/EU authorities, DCAT-AP and Core Public Service Vocabulary facilitate structured, machine-readable metadata and service discoverability. | If data exchange with external authorities is introduced, align metadata and data exchange protocols with DCAT-AP and relevant EU Core Vocabularies. |
| Interoperable Europe model governance templates and procurement clauses for data protection and digital public services. | Clear governance allocation and procurement language for ICT services prevents ambiguity and fragmentation, as noted as missing in the assessment. | Reference or adapt standardised governance templates and procurement checklists addressing accessibility, data protection, and interoperability. |
| EIF 3.0 (European Interoperability Framework) multichannel service design principles. | EIF 3.0 sets out good practice for defining, managing, and harmonising delivery across physical, digital, and hybrid channels to improve user experience and interoperability. | Apply EIF 3.0 principles when designing services and workflows, explicitly specifying and harmonising digital and non-digital channels to reduce fragmentation. |

## 9.2 Reuse Opportunities

- Reuse of harmonised data models and classification schemas for disability status and needs in national and European reporting (Core Vocabularies, ECHI, ICD, ICF).
- Reuse and referencing of accessibility frameworks (WCAG, EN 301 549) for digital content and service platforms.
- Reference EIF 3.0 for multichannel and user-centric service delivery, and integrate with existing Interoperable Europe accessibility and inclusion blueprints.
- Adoption of standard GDPR-aligned technical and organisational templates for sensitive data management and governance documentation.
- Application of DCAT-AP for open data cataloging if public statistical reporting or data sharing is implemented.
- Utilise Interoperable Europe model procurement and governance clauses when acquiring or enhancing digital systems affecting accessibility or data handling.

# 10. Full Risk Prioritisation and Corrective Measures

## 10.1 Risk Register Summary

### R-01 - Absence of technical requirements for confidentiality and security of sensitive disability records

The policy establishes confidentiality for sensitive personal data but fails to specify the technical or procedural controls (such as encryption, access control, or audit trails) that are required to ensure effective data protection and legal compliance. Supporting related issues include: Missing technical specification and architecture for planned digital accessibility services; Absence of timeframes or review cycles for data and service updates.

Layer: Security and trust. Priority: High. Mitigation: Define, document, and enforce technical and organisational measures for data protection-covering encryption, access management, logging, and GDPR-aligned audit procedures.

### R-02 - Under-specified governance and role allocation for disability data management

The policy lacks explicit assignment of data controllers, processors, and other governance roles for collecting and handling sensitive personal data on disabilities and special educational needs, leaving responsibilities and accountability chains undefined. Supporting related issues include: Lack of semantic standardisation for accessible information formats and disability data; Unclear channel differentiation for digital and non-digital service provision.

Layer: Governance. Priority: High. Mitigation: Explicitly define and publish role assignments, governance structures, and reporting lines for all processes and information systems handling disability-related data.

### R-03 - No provision for integration with national or European disability registries and data exchanges

The policy does not address future harmonisation or technical integration with national, EU, or international disability databases or reporting frameworks, which may later be required by law or for cross-institutional comparability.

Layer: Governance. Priority: Medium. Mitigation: Monitor external legal and technical developments and plan for integration or alignment with national and EU-level frameworks in future ICT upgrades or procurements.

## 10.2 Corrective Measures and Drafting Recommendations

### REC-01 - Implementation measure

Define and implement technical and organisational measures ensuring confidentiality and security for all sensitive disability-related records and data collections.

| | |
|---|---|
| **RELATED RISK** | R-01 |
| **BINDING REQUIREMENTS** | BR-03 |
| **IMPLEMENTATION NOTE** | Specify clear requirements for technical and organisational measures aligned with GDPR Article 32, including access control, encryption, audit logging, and data minimisation for all digital systems managing disability or special educational needs information. |

### REC-02 - Governance action

Assign and transparently document roles and responsibilities for data controller, data processor, and system governance for all disability data management activities.

| | |
|---|---|
| **RELATED RISK** | R-02 |
| **BINDING REQUIREMENTS** | BR-04 |
| **IMPLEMENTATION NOTE** | Formally designate data controllers/processors for each data collection or registry activity and establish a governing committee with oversight for inclusion and data protection processes. |

### REC-03 - Technical specification

In all digital accessibility, information, and data collection systems, where appropriate, require alignment with well-established European accessibility and interoperability standards.

| | |
|---|---|
| **RELATED RISK** | R-01 |

| | |
|---|---|
| **IMPLEMENTATION NOTE** | Reference and where appropriate, require compliance with the Web Content Accessibility Guidelines (WCAG 2.1 or newer) and, where applicable, EN 301 549 for all digital content, and adopt appropriate machine-readable formats for structured data. |

### REC-04 - Implementation measure

Adopt harmonised data models and classification schemas for recording disability data and participation profiles.

| | |
|---|---|
| **TRACEABILITY LINK** | SI-02 \| TI-02 |
| **IMPLEMENTATION NOTE** | Select and document disability data schemas and vocabularies compatible with international/EU frameworks (e.g., ICF, ICD, EU Core Vocabularies), and ensure mappings are maintained where national reporting frameworks are in use. |

### REC-05 - Governance action

Introduce periodic review mechanisms to monitor alignment with evolving national and EU interoperability, accessibility, and inclusion obligations.

| | |
|---|---|
| **RELATED RISK** | R-03 |
| **IMPLEMENTATION NOTE** | Develop or reference annual compliance checks and interoperability reviews for all data handling and accessibility obligations, explicitly linking to any changes in national or European policy or legal requirements. |

### REC-06 - Operational guidance

Establish clear operational procedures for the provision of accessible information across all channels.

| | |
|---|---|
| **TRACEABILITY LINK** | SI-01 \| TI-03 \| UX-01 |
| **IMPLEMENTATION NOTE** | Develop internal guidance and checklists for universal accessibility in digital communications, specifying the process for delivering alternative formats upon request and validating all outputs with user representatives. |

### REC-07 - Monitoring action

Implement ongoing monitoring and incident reporting for the security and integrity of disability-related records.

| | |
|---|---|
| **RELATED RISK** | R-01 \| R-02 |
| **IMPLEMENTATION NOTE** | Establish monitoring protocols for all access to sensitive records and publish clear procedures for incident reporting, response, and follow-up, including user notification and corrective action processes. |

### REC-08 - Legal drafting

In future revisions, specify the minimum accessibility standard and reference applicable technical frameworks directly in the policy text.

| | |
|---|---|
| **BINDING REQUIREMENTS** | BR-01 \| BR-02 |
| **IMPLEMENTATION NOTE** | Explicitly reference WCAG, EN 301 549 (if digital content is present), and national digital accessibility legislation, and clarify how the policy adapts to new accessibility obligations. |

#### 10.2.1 Requirement-Risk-Recommendation Traceability

| Recommendation | Related risk | Related binding requirement | Action type | Corrective focus |
|---|---|---|---|---|
| REC-01 | R-01 | BR-03 | Implementation measure | Define and implement technical and organisational measures ensuring confidentiality and security for all sensitive disability-related records and data collections. |

| Recommendation | Related risk | Related binding requirement | Action type | Corrective focus |
|---|---|---|---|---|
| REC-02 | R-02 | BR-04 | Governance action | Assign and transparently document roles and responsibilities for data controller, data processor, and system governance for all disability data management activities. |
| REC-03 | R-01 | Cross-cutting implementation dependency | Technical specification | In all digital accessibility, information, and data collection systems, where appropriate, require alignment with well-established European accessibility and interoperability standards. |
| REC-04 | Cross-cutting | Cross-cutting implementation dependency | Implementation measure | Adopt harmonised data models and classification schemas for recording disability data and participation profiles. |
| REC-05 | R-03 | Cross-cutting implementation dependency | Governance action | Introduce periodic review mechanisms to monitor alignment with evolving national and EU interoperability, accessibility, and inclusion obligations. |
| REC-06 | Cross-cutting | Cross-cutting implementation dependency | Operational guidance | Establish clear operational procedures for the provision of accessible information across all channels. |
| REC-07 | R-01; R-02 | Cross-cutting implementation dependency | Monitoring action | Implement ongoing monitoring and incident reporting for the security and integrity of disability-related records. |
| REC-08 | Cross-cutting | BR-01; BR-02 | Legal drafting | In future revisions, specify the minimum accessibility standard and reference applicable technical frameworks directly in the policy text. |

## 10.3 Implementation Roadmap

| Period | Actions |
|---|---|
| 0-3 months | Assign data controller and processor roles for all disability data management systems and activities.; Initiate a GDPR-compliant data protection impact assessment (DPIA) for sensitive data processing.; Develop and communicate a compliance and review schedule for accessible information provision.; Draft and publish minimum accessibility standards (e.g., WCAG) for digital content and services. |
| 3-6 months | Implement access controls, encryption, and audit logging for all relevant digital systems.; Adopt harmonised data models and vocabularies for disability registries.; Deliver staff training on inclusion policies, data handling, and accessibility protocols.; Draft operational guidance and checklists for accessible communications. |
| 6-12 months | Conduct regular reviews to monitor compliance with accessibility and data protection obligations.; Complete alignment of data registries with potential national/EU reporting and semantic frameworks.; Initiate accessible multi-channel consultations and feedback processes with user involvement.; Implement security monitoring and periodic vulnerability testing of digital platforms. |

# 11. Conclusions

## 11.1 Overall Assessment Findings

The assessment identified 7 documented binding requirements, 26 interoperability findings, 3 prioritised risks and 8 corrective recommendations. The trigger outcome is: Voluntary assessment recommended. The main residual risks concern implementation choices, common templates, governance coordination and the legal-to-technical translation of obligations into interoperable public-service practice.

## 11.2 Residual Risks and Outstanding Issues

Residual risks mainly concern implementation dependencies, under-specified technical or semantic requirements, governance coordination, and the distinction between legal enablement and operational interoperability.

## 11.3 Recommended Next Steps

- Define and implement technical and organisational measures ensuring confidentiality and security for all sensitive disability-related records and data collections.
- Assign and transparently document roles and responsibilities for data controller, data processor, and system governance for all disability data management activities.
- In all digital accessibility, information, and data collection systems, where appropriate, require alignment with well-established European accessibility and interoperability standards.
- Adopt harmonised data models and classification schemas for recording disability data and participation profiles.
- Introduce periodic review mechanisms to monitor alignment with evolving national and EU interoperability, accessibility, and inclusion obligations.
- Establish clear operational procedures for the provision of accessible information across all channels.

## 11.4 Final Conclusion

This is assessed as a draft instrument. A mandatory Interoperable Europe Act assessment is not established at this stage unless the draft or its implementation decisions set new or substantially modified binding requirements for trans-European digital public services. A targeted or voluntary assessment is nevertheless recommended before adoption or implementation where digital registries, platforms, certificates, consular workflows, publication mechanisms or procurement specifications are involved.

Findings should be reviewed against the final legal text, implementing measures and any later technical or operational specifications. Implementation-level recommendations remain distinct from direct legal obligations and are marked through evidence strength and confidence indicators.

# 12. Annexes

# Annex A - Full Binding Requirements Matrix

| ID | Provision | Requirement | Type | Actors | Digital relevance | Cross-border relevance | Evidence strength | Confidence |
|---|---|---|---|---|---|---|---|---|
| BR-01 | Cross-cutting evidence from relevant AI Act provisions PAGE / | The University of the Aegean must systematically provide a universally accessible, supportive, safe, and inclusive environment for all persons with disabilities and special educational needs across all academic and administrative functions. | legal / organisational | University administration; Academic staff; Administrative staff; Students with disabilities; Students with special educational needs; Visitors with disabilities | Directly relevant for any digital systems and content providing university information or services. | Potential cross-border effect for international/mobile students; linked to international obligations (UN CRPD). | explicit | high |
| BR-02 | Cross-cutting evidence from relevant AI Act provisions PAGE / | The University must ensure the provision of information in accessible formats and make available specialized tools for multiple forms of access to information resources and activities. | legal / organisational | University IT services; University communications offices; Persons with disabilities; Students with special educational needs | Direct digital public service effect regarding the accessibility of university websites, platforms, and electronic materials. | Indirect, as accessible materials facilitate use by foreign/mobile users. | explicit | high |
| BR-03 | Cross-cutting evidence from relevant AI Act provisions PAGE / | The University must ensure confidentiality in maintaining sensitive personal data of persons with disabilities and special educational needs. | legal / technical | University data controllers; University IT and records management staff; All organisational units handling personal data | Direct, as confidentiality obligations apply to any digital system or database managing personal or sensitive information on disabilities. | Indirect, if data of foreign students or cross-border data sharing ever arises. | explicit | high |
| BR-04 | Cross-cutting evidence from relevant AI Act provisions PAGE / | The University aims to record data on the frequency and forms of persons with disabilities and special educational needs, the barriers they encounter, and specifically track the needs and outcomes of students in this group as part of institutional profiling and planning. | organisational / technical / governance | University registry/data collection units; Institutional plannin g/governance bodies; Persons with disabilities | Direct for database/registry deployment; guides the requirements for structured, potentially digital information systems. | Potential, if reporting requirements or aggregations are shared externally or cross-border. | explicit | high |
| BR-05 | Cross-cutting evidence from relevant AI Act provisions ARTICLE / Άρθρο 1 | The University must recognize the definition of disability in accordance with the UN Convention on the Rights of Persons with Disabilities, encompassing long-term physical, mental, intellectual, or sensory impairments that may hinder full and effective participation in society. | legal | University governance bodies; All administrative/ac ademic units | Provides the definitional basis for inclusive database design and qualification for digital accessibility services. | High, because the Convention is international and applies to foreign as well as domestic persons. | explicit | high |
| BR-06 | Cross-cutting evidence from relevant AI Act provisions ARTICLE / Άρθρο 21 | The University must ensure that persons with disabilities have access to higher education, professional training, and lifelong learning on an equal basis with others, providing reasonable accommodations as necessary. | legal / organisational | University admissions; Academic departments; Support services; Students with disabilities | Direct, as accessible digital admissions, course delivery, and support tools may be required, particularly where such processes are digitised. | Potential, especially for mobile and foreign students benefiting from equal access and accommodation. | explicit | high |
| BR-07 | Cross-cutting evidence from relevant AI Act provisions ARTICLE / Άρθρο 24 | The University must ensure that persons with disabilities enjoy measures securing autonomy, professional integration, and participation in the social, economic, and political life of the country. | legal / organisational | University governance; All staff; Students with disabilities | Indirect but critical for digital service delivery, as this obligation frames the requirement to remove digital and procedural barriers. | Potential (not limited to nationals) | explicit | high |

# Annex B - Affected Services, Stakeholders and Dependencies

| Service ID | Service | Public service | Trans-European | Network/system interaction | Data exchanged | Bodies | Recipients | Confidence |
|---|---|---|---|---|---|---|---|---|
| S-01 | Accessible University Information and Communications | yes | partial | Potential web platforms or electronic content distribution systems for university communications | Digital content (accessible formats); Notifications; Accessible information | University communications office; University IT services | Students with disabilities; Staff with disabilities; Visitors with disabilities; Students with special educational needs | high |
| S-02 | Administrative and Academic Support Services (Accessible Interfaces) | partial | unclear | Potential back-office tools, student service platforms, service workflows | Service requests; Support tickets; Administrative advisories | University secretariat; Student affairs services; Academic departments | Students with disabilities; Students with special educational needs; All staff | high |
| S-03 | Disability and Participation Data Collection and Registry | partial | unclear | Internal university registry/database; potential reporting to national authorities | Personal data; Statistical data; Institutional reports | University data collection unit; Registry office; Institutional plannin g/governance | University governance; Quality assurance units; Potentially students or external bodies (for statistics) | high |
| S-04 | Confidential Records and Sensitive Data Protection Service | partial | unclear | Possibly involves digital records, access management; likely internal university systems | Sensitive data; Consent records; Access logs (if implemented) | University data controllers; University IT and records management staff | Students and staff with disabilities; Ov ersight/governance bodies | high |
| S-05 | Inclusive Participation in University Consultations | partial | no | Digital consultation tools if implemented | Consultation documents; Feedback submissions | University governance; Communications office | Students and staff with disabilities/special educational needs | medium |

## Annex C - Legal-to-Technical Translation Matrix

| Requirement | Direct legal requirement | Directly implied technical needs | Recommended implementation specifications | Not evidenced / needs implementation document | Evidence strength | Confidence |
|---|---|---|---|---|---|---|
| BR-01 | The University of the Aegean must systematically provide a universally accessible, supportive, safe, and inclusive environment for all persons with disabilities and special educational needs across all academic and administrative functions. | Accessible digital platforms and electronic content following accessibility principles; Adjustment of digital and physical university services to be barrier-free | Adopt recognised digital accessibility standards (e.g., WCAG 2.1 or later, if digitised); Integrate user feedback mechanisms to continuously assess accessibility barriers | No explicit technical specification, metadata model, or architectural blueprint for digital accessibility implementation | explicit legal basis; inferred implementation gap | high |
| BR-02 | The University must ensure the provision of information in accessible formats and make available specialized tools for multiple forms of access to information resources and activities. | Support for multiple accessible content formats (e.g., alternative text, captions, screen reader compatibility); Provision of assistive technology tools or software interfaces | Reference WCAG for digital content delivered by university platforms; Enable and document procedures for providing alternative media upon request | No explicit mention of required technical standards, APIs, or machine-readable formats for accessible content; No reference to interoperability profiles for assistive technologies | explicit legal basis; inferred implementation gap | high |
| BR-03 | The University must ensure confidentiality in maintaining sensitive personal data of persons with disabilities and special educational needs. | Confidentiality controls in IT systems storing or managing sensitive personal data; Appropriate technical and organisational measures to restrict access to sensitive data | Reference GDPR requirements for data protection by design and by default; Employ role-based access control for digital records containing special category data | No explicit specification regarding encryption, logging or authentication; No mention of required audit trails or processor-controller distinction | explicit legal basis; inferred implementation gap | high |
| BR-04 | The University aims to record data on the frequency and forms of persons with disabilities and special educational needs, the barriers they encounter, and specifically track the needs and outcomes of students in this group as part of institutional profiling and planning. | Structured database or registry for recording disability-related information, barriers, and outcomes; Procedures for periodic data collection and updating | Develop or adopt a data model reflecting the categorisation and reporting needs (potentially based on international classification systems); Implement data minimisation and privacy measures for sensitive demographic information | No detailed data model or technical specification for the registry; No mention of interoperability with national or trans-European systems; No explicit role assignment for data controller/processor responsibilities | explicit legal basis; inferred implementation gap | high |
| BR-05 | The University must recognize the definition of disability in accordance with the UN Convention on the Rights of Persons with Disabilities, encompassing long-term physical, mental, intellectual, or sensory impairments that may hinder full and effective participation in society. | Consistent use of the UN CRPD definition in all digital and data systems that track or process disability status or eligibility | Align database schema and eligibility rules to international definitions; Review data collection procedures to avoid inconsistent or discriminatory categorisation | No explicit mapping of the UN CRPD classification to data fields or information models | explicit legal basis; inferred implementation gap | high |

| Requirement | Direct legal requirement | Directly implied technical needs | Recommended implementation specifications | Not evidenced / needs implementation document | Evidence strength | Confidence |
|---|---|---|---|---|---|---|
| BR-06 | The University must ensure that persons with disabilities have access to higher education, professional training, and lifelong learning on an equal basis with others, providing reasonable accommodations as necessary. | Accessible digital admissions, registration, and learning management systems for persons with disabilities; Technical capability to support and document reasonable accommodations in digital processes | Apply accessibility standards to online forms, registration systems, and e-learning platforms; Maintain digital records of accommodation requests and their resolution, in compliance with privacy rules | No explicit IT platform or technical solution described for accommodation processes | explicit legal basis; inferred implementation gap | high |
| BR-07 | The University must ensure that persons with disabilities enjoy measures securing autonomy, professional integration, and participation in the social, economic, and political life of the country. | Removal of technical barriers in digital and online systems that could impede autonomy and participation; Proactive review of all digital service flows for such barriers | Conduct periodic accessibility and usability audits for all university platforms; Establish feedback and incident reporting channels for inaccessible or exclusionary digital practices | No explicit technical or procedural mechanism for periodic review or user feedback in the current evidence | explicit legal basis; inferred implementation gap | high |

# Annex D - Interoperability Maturity Profile

| Dimension | Level | Why not higher | Improvement path | Confidence |
|---|---|---|---|---|
| Legal maturity | high | High is the maximum score on this scale; achievement of detailed legal maturity is strong, but enforceability depends on successful implementation and periodic legal review. | Ensure ongoing legal monitoring and update policy when national or EU obligations change. | high |
| Organisational maturity | medium | Lack of explicit governance assignments and missing process documentation prevents a high maturity rating. | Assign and document operational roles (data controller/processors), and formalise quality assurance and record-keeping procedures. | medium |
| Semantic maturity | low | Absence of enforced semantic frameworks or cross-system alignment limits the possibility for interoperable or harmonised data exchange. | Reference and implement recognised classification schemas (e.g., ICD, ICF) and controlled vocabularies in system and document design. | high |
| Technical maturity | low | No evidence of technical requirements or implementation planning for digital platforms, databases, or content management systems. | Develop and publish technical specifications, access management and audit mechanisms, and align systems with EU digital accessibility and interoperability standards. | high |
| Governance maturity | low | Governance chains, accountability structures, and reporting flows remain undefined, and there is no linkage to national or EU governance frameworks. | Explicitly assign roles and responsibilities, define audit and reporting workflows, and provide governance documentation for both internal and external interoperability. | high |
| Digital-first maturity | medium | Digital delivery is not functionally separated from analogue or hybrid channels, and technical digitalisation strategies are missing. | Prioritise digital channel design and invest in integrated, accessible university digital information and data management systems. | medium |
| Reuse maturity | low | No reference to or integration with national/European interoperability solutions, registries, or accessibility platforms. | Identify and integrate reusable European and national assets (e.g., vocabularies, templates, technical guides) for accessible information and disability data management. | high |
| Automation readiness | low | No technical or procedural evidence of workflow automation, data integration tools, or automated compliance monitoring. | Plan automation for data collection, service delivery, and compliance reporting, using EU best practices where feasible. | high |
| Security and trust maturity | low | Without technical and organisational controls, confidentiality and trust cannot be assured in digital workflows or services. | Define, implement, and monitor technical and organisational security controls compliant with national/EU data protection law and best practices. | high |

# Annex E - Evidence Traceability Matrix

| Item ID | Source | Evidence excerpt | Interpretation | Evidence strength | Confidence |
|---|---|---|---|---|---|
| BR-01 | Cross-cutting evidence from relevant AI Act provisions PAGE / | Το Πανεπιστήμιο Αιγαίου επιδιώκει τη δημιουργία ενός Συμπεριληπτικού Πανεπιστημίου. να παρέχει σε όλα τα άτομα με ειδικές εκπαιδευτικές ανάγκες και αναπηρία/ες ένα καθολικά προσβάσιμο, υποστηρικτικό, ασφαλές και χωρίς αποκλεισμούς περιβάλλον. | The University of the Aegean must systematically provide a universally accessible, supportive, safe, and inclusive environment for all persons with disabilities and special educational needs across all academic and administrative functions. | explicit | high |
| BR-02 | Cross-cutting evidence from relevant AI Act provisions PAGE / | Η παροχή πληροφοριών σε προσβάσιμες μορφές και παροχή εξειδικευμένων εργαλείων για πολλαπλή πρόσβαση σε πηγές πληροφοριών και δραστηριοτήτων. | The University must ensure the provision of information in accessible formats and make available specialized tools for multiple forms of access to information resources and activities. | explicit | high |

| Item ID | Source | Evidence excerpt | Interpretation | Evidence strength | Confidence |
|---|---|---|---|---|---|
| BR-03 | Cross-cutting evidence from relevant AI Act provisions PAGE / | Το Πανεπιστήμιο θα διασφαλίζει την εμπιστευτικότητα στην τήρηση των ευαίσθητων προσωπικών δεδομένων των ατόμων με ε.ε.α./α. | The University must ensure confidentiality in maintaining sensitive personal data of persons with disabilities and special educational needs. | explicit | high |
| BR-04 | Cross-cutting evidence from relevant AI Act provisions PAGE / | Το Πανεπιστήμιο στοχεύει στην καταγραφή δεδομένων σχετικά με τη συχνότητα και τις μορφές των ατόμων με ε.ε.α./α., . χαρτογραφώντας έτσι το προφίλ του Πανεπιστημίου Αιγαίου στον τομέα αυτό. | The University aims to record data on the frequency and forms of persons with disabilities and special educational needs, the barriers they encounter, and specifically track the needs and outcomes of students in this group as part of institutional profiling and planning. | explicit | high |
| BR-05 | Cross-cutting evidence from relevant AI Act provisions ARTICLE / Άρθρο 1 | Με βάση τη Σύμβαση για τα Δικαιώματα των Ατόμων με Αναπηρίες, που υιοθετήθηκε από τη Γενική Συνέλευση του Οργανισμού Ηνωμένων Εθνών. | The University must recognize the definition of disability in accordance with the UN Convention on the Rights of Persons with Disabilities, encompassing long-term physical, mental, intellectual, or sensory impairments that may hinder full and effective participation in society. | explicit | high |
| BR-06 | Cross-cutting evidence from relevant AI Act provisions ARTICLE / Άρθρο 21 | Τα άτομα με αναπηρίες είναι σε θέση να έχουν πρόσβαση στη γενική τριτοβάθμια εκπαίδευση. χωρίς διακρίσεις και σε ίση βάση με τους άλλους. Για το λόγο αυτό, τα Συμβαλλόμενα Κράτη διασφαλίζ ουν ότι παρέχεται εύλογη προσαρμογή στα άτομα με αναπηρίες. | The University must ensure that persons with disabilities have access to higher education, professional training, and lifelong learning on an equal basis with others, providing reasonable accommodations as necessary. | explicit | high |
| BR-07 | Cross-cutting evidence from relevant AI Act provisions ARTICLE / Άρθρο 24 | Τα άτομα με αναπηρίες έχουν δικαίωμα να απολαμβάνουν μέτρων που εξασφαλίζουν την αυτονομία, την επαγγελματική ένταξη και τη συμμετοχή τους στην κοινωνική, οικονομική και πολιτική ζωή της Χώρας. | The University must ensure that persons with disabilities enjoy measures securing autonomy, professional integration, and participation in the social, economic, and political life of the country. | explicit | high |
| R-01 | Cross-cutting evidence from relevant AI Act provisions | Το Πανεπιστήμιο θα διασφαλίζει την εμπιστευτικότητα στην τήρηση των ευαίσθητων προσωπικών δεδομένων των ατόμων με ε.ε.α./α. | The policy establishes confidentiality for sensitive personal data but fails to specify the technical or procedural controls (such as encryption, access control, or audit trails) that are required to ensure effective data protection and legal compliance. | explicit | high |
| R-02 | Cross-cutting evidence from relevant AI Act provisions | No detailed governance, audit trail, or data controller/data processor role specification for the data collection or records system. | The policy lacks explicit assignment of data controllers, processors, and other governance roles for collecting and handling sensitive personal data on disabilities and special educational needs, leaving responsibilities and accountability chains undefined. | missing | low |
| R-03 | Cross-cutting evidence from relevant AI Act provisions | No mention of cross-border data exchange mechanisms or integration with national/trans-European systems. | The policy does not address future harmonisation or technical integration with national, EU, or international disability databases or reporting frameworks, which may later be required by law or for cross-institutional comparability. | missing | low |

# Annex F - Requirement-Risk-Recommendation Traceability

| Recommendation | Related risk | Related binding requirement | Action type | Corrective focus |
|---|---|---|---|---|
| REC-01 | R-01 | BR-03 | Implementation measure | Define and implement technical and organisational measures ensuring confidentiality and security for all sensitive disability-related records and data collections. |
| REC-02 | R-02 | BR-04 | Governance action | Assign and transparently document roles and responsibilities for data controller, data processor, and system governance for all disability data management activities. |
| REC-03 | R-01 | Cross-cutting implementation dependency | Technical specification | In all digital accessibility, information, and data collection systems, where appropriate, require alignment with well-established European accessibility and interoperability standards. |
| REC-04 | Cross-cutting | Cross-cutting implementation dependency | Implementation measure | Adopt harmonised data models and classification schemas for recording disability data and participation profiles. |

| Recommendation | Related risk | Related binding requirement | Action type | Corrective focus |
|---|---|---|---|---|
| REC-05 | R-03 | Cross-cutting implementation dependency | Governance action | Introduce periodic review mechanisms to monitor alignment with evolving national and EU interoperability, accessibility, and inclusion obligations. |
| REC-06 | Cross-cutting | Cross-cutting implementation dependency | Operational guidance | Establish clear operational procedures for the provision of accessible information across all channels. |
| REC-07 | R-01; R-02 | Cross-cutting implementation dependency | Monitoring action | Implement ongoing monitoring and incident reporting for the security and integrity of disability-related records. |
| REC-08 | Cross-cutting | BR-01; BR-02 | Legal drafting | In future revisions, specify the minimum accessibility standard and reference applicable technical frameworks directly in the policy text. |
